

# Door Lock Drive – pro

HmIP-DLP, HmIP-DLP-A, HmIP-DLP-AS, HmIP-DLP-WS

The particularly sleek door lock drive – pro makes locking, unlocking and opening front doors smart and easy via keypad, voice control or app. Time schedules and access authorisations, for example, can be configured intuitively using the Homematic IP app. The integrated tamper sensors immediately detect any attempted dismantling or tampering. The door lock drive can be glued, clamped or screwed to the door easily. It is universal and can be used with all standard door lock cylinders that have emergency and hazard functions and with all door knob cylinders.

## TECHNICAL SPECIFICATIONS

Supply voltage	4x 1.5 V LR6/Mignon/AA, 4x 1.2 V HR6/Mignon/AA
Battery life	1.5 years (typical)
Degree of protection	IP20
Ambient temperature	-10 to +55°C
Weight (incl. batteries)	320 g
Dimensions (W x H x D)	43 x 131 x 55 mm
Radio frequency band	868.0–868.6 MHz / 869.4–869.65 MHz

## HIGHLIGHTS

- Easy to retrofit without replacing the locking system
- Open and lock the door and constantly monitor the status
- Automatic locking for enhanced security
- Reliably detects attempted break-ins, tampering and vibration
- Powerful motor with optional whisper mode and long battery life

## APPLICATION AREAS

Security and alarm, Access

## PACKAGE CONTENTS

Door Lock Drive – pro  
 4x 1.5 V LR6/Mignon/AA  
 1x double-sided adhesive pad  
 1x door magnet  
 Operating manual

## LOGISTIC DATA

Colour	White	Anthracite	Anthracite silver	White-silver
Product reference	161671A0	162500A0	162826A0	162822A0
EAN code	4047976616718	4047976625000	4047976628261	4047976628223
Short description	HmIP-DLP	HmIP-DLP-A	HmIP-DLP-AS	HmIP-DLP-WS
Packaging unit			32	
Packing dimensions			184 x 140 x 73 mm	
Weight incl. packaging			529.6 g	

### CONVENIENT ACCESS CONTROL

You can now lock, unlock and even open your front door whenever you want – from wherever you want, simply using the Homematic IP app or key ring remote control.

Another advantage: You can even securely lock the door using voice control with Amazon Alexa or Google Home.

### YOU DECIDE WHO CAN ENTER

Thanks to configurable access authorizations, access to the smart home can be individually managed – regardless of the time of day or day of the week. The front door can only be opened when the occupier wants it to be. For example, cleaners and care workers can access your home at specific times with a key ring remote control, and, as an option, only during a predefined period (with a start / end date or time).

### IS THE FRONT DOOR REALLY LOCKED?

With scheduled locking, you'll never need to ask this question again. You can schedule the front door to lock automatically at whatever time you want (e.g. overnight). This not only increases the security of your smart home, but it also saves you from having to go and check the front door.

For those who want to play it safe, you can also schedule the front door – after each unlocking action – to automatically relock the door immediately again. Schedules and delay times can be set via the app according to your requirements.

### ABSOLUTELY SECURE

Multiple integrated sensors continuously monitor the door and lock status, including vibration sensors, sensors for detecting the direction of actuation during manual operation (outside with a key or inside with the control wheel), blockage sensors, error detection sensors and door status detection sensors (open / closed). The system reports abnormalities such as attempted break-ins, vibrations and tampering. In addition, the integrated tampering detection system alerts you to any potential causes for action, for example in holiday apartments.

Your home remains protected even when the smart home system is unavailable. The lock can trigger a siren directly in the event of tampering or an attempted break-in – without any need for an internet connection.

### SMART AND SIMPLE RETROFITTING

The device supports installation with adhesive strips, clamps or screws, making it suitable for nearly all common EU profile cylinders and Spanish TESA rosettes. Even with a cylinder projection of 0 mm, installation with adhesive strips remains possible. Different rosette geometries and screw spacings are accommodated by suitable adapter solutions. For example, with oval or round rosettes (adapter required), the door lock cylinder can be mounted directly on the door leaf – ideal for retrofitting without making any structural modifications to the door or lock.

### NUMEROUS OTHER ADVANTAGES

- Up to 8 access authorisations with individual time schedules per door lock drive
- Can be opened and closed at any time with the control wheel (emergency function)
- The door can still be opened from the outside with an ordinary key
- Personal PINs to protect against unauthorised operation via the app
- Environmentally friendly operation using HR6 NiMH rechargeable batteries
