## Homematic IP Home Control Unit

## Simply secure

### ■ Online and offline mode

Operate your smart home purely locally or connect it to the secure Homematic IP cloud servers to utilise convenient functions such as remote access, automatic updates and voice control. The choice is yours.

### ■ Local data backup

All settings, measurement data and automation routines are stored directly in the control unit and in the connected Homematic IP devices. This makes your smart home more reliable than ever before.

### ■ VDE-certified security

Rely on the sevenfold certified protocol, IT and data security of the Homematic IP system.

## Next Level Smart Home

The Homematic IP Home Control Unit makes the smart home more convenient, more flexible and more secure than ever before. The powerful control unit is suitable for smart home beginners as well as experienced owners and grants the user full control. Decide for yourself whether you want to operate your smart home offline and therefore purely locally or connect it to the secure Homematic IP cloud servers in Germany for advanced convenience functions. In both cases, all device information is only stored locally and never leaves your home.

Enjoy the benefits of intuitive app control for the first time with a Homematic IP Control Unit. A wizard guides you through the entire setup of your smart helpers and makes it easier than ever to create intelligent automation routines that make your everyday life easier.

## Simple expansion

### Plug-in interface

Plug-ins allow you to easily expand your system with new components and partner products such as Philips Hue lamps. In future you can develop and use your own Plug-ins and enjoy almost unlimited freedom in the configuration of your smart home.

### One for all

The Homematic IP Home Control Unit supports the entire Homematic IP portfolio with more than 80 modular devices. From radiator thermostats to motion detectors – everything can be conveniently controlled.

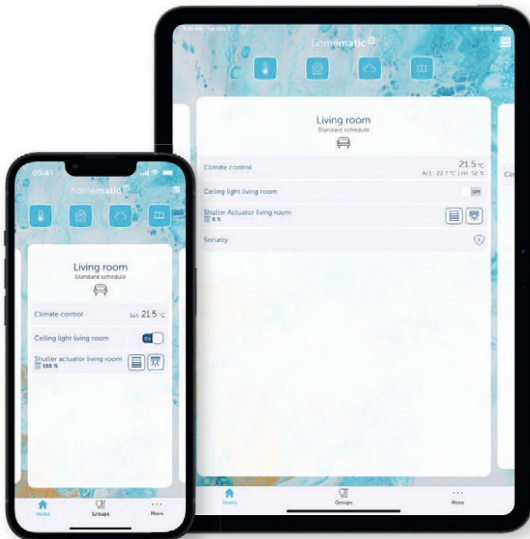

## Simply comfortable

### The Homematic IP app

The free app makes controlling your smart home incredibly simple. Connect, configure, monitor and control all your smart home devices conveniently from your smartphone or tablet. The app guides you step by step through the setup process and allows you to control heating, lighting, security and more – whether you're at home or on the move.

### Remote access

Whether you're on holiday lying by the pool, at the supermarket checkout or at work, with Homematic IP, your home is always just a fingertip away. You can control every function of your smart home from wherever you are via the secure internet connection to our cloud servers in Germany.

## Simply intelligent

### Energy monitoring

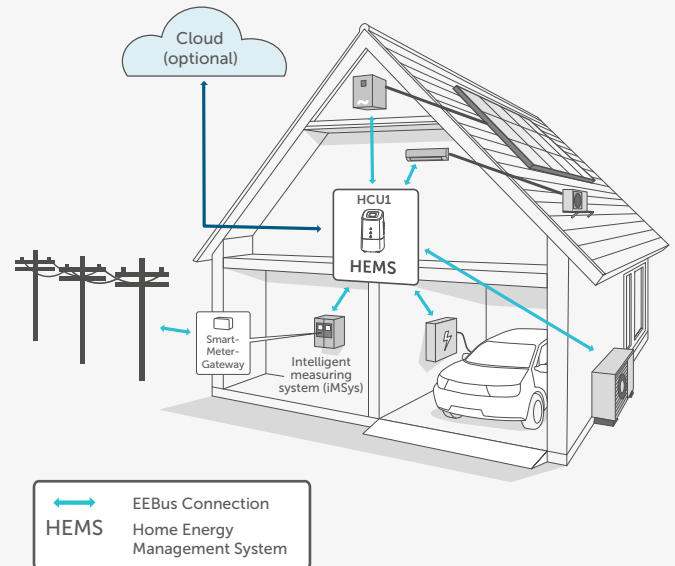

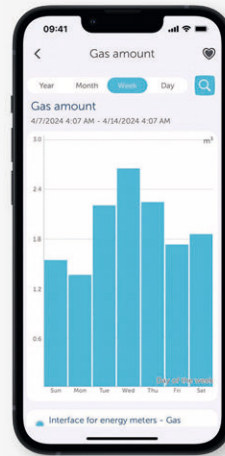

Monitor all the energy flows in your home with the energy dashboard.

### EEBus interface

Connect inverters, heat pumps, wall boxes and more.

### Ready for EN 50631

Benefit from the advantages of smart energy management for controlling switchable consumers (from 2025).

# The benefits of Homematic IP

- A system with endless possibilities when it comes to heating, shading, lighting, access, energy management and security
- Flexibly expand the system at any time
- Controlled with the free Homematic IP app – very simple and no registration required
- Save energy with intelligent functions
- Certified security and maximum data protection
